

WORKBOOK—SECTION TWO

Designing Your AAA Sequence

Use this section to map AAA at both scales: the full experience and the next lesson.

Name of Experience / Module / Pipeline:

Stage 1: Application

7. What real thing will the learner touch, test, make, or play with immediately?

The learner will start by trying a short activity or example related to the topic. They will get to practice it themselves instead of only listening to an explanation.

8. What productive friction do you want them to encounter here? What misconception should fail safely?

The learner might make a few mistakes or realize that their first idea does not work. This helps them learn from the mistake without serious consequences.

Stage 2: Action

9. What are the 3-5 core concepts, definitions, or moves that should arrive only after Stage 1?

- The main idea of the topic
- Important vocabulary and definitions
- The steps for doing the task correctly
- Common mistakes to avoid
- Ways to improve their results

10. How will the learner use those ideas to refine what they already began?

They will use what they learned to go back to their first attempt and improve it. They can fix mistakes, try a different approach, and make their work better.

Stage 3: Amplification

11. What bigger frameworks, professional practices, or collaborative contexts will open here?

The learner will be able to connect what they learned to real-world situations and professional practices. They can also work with others, share ideas, and use teamwork to improve their skills.

12. How does AAA work at the macro scale of the full experience and at the micro scale of one lesson or node?

At the macro scale, AAA guides the learner through the entire experience from trying something to improving it and applying it in a bigger context. At the micro scale, the same process can happen within one lesson: try, learn, improve, and apply.
